History and Legacy of the Saturn Vue

The Saturn Vue was first introduced in 2002 as Saturn's entry into the compact crossover SUV market. It gained popularity for combining the practicality of an SUV with the handling and efficiency of a smaller vehicle. Production of the Vue continued until 2009, with two generations released during that period. The model was notable for being one of the early adopters of hybrid technology in the SUV segment.

Development and Production Timeline

The Saturn Vue was produced from 2002 through 2009, with a major redesign for the 2008 model year. It was built on General Motors' Theta platform and shared components with other GM vehicles. The hybrid version, introduced in 2007, was among the first hybrid SUVs available in the United States, showcasing Saturn's commitment to innovation.

Impact on the Compact SUV Segment

The Vue helped establish Saturn's reputation for creating practical, affordable vehicles with distinct styling and solid build quality.
