Program Overview and Structure

The Hackensack University Medical Center Program Internal Medicine Residency offers a rigorous and well-rounded curriculum aimed at developing competent, compassionate internists. The program spans three years, during which residents acquire comprehensive training in the diagnosis and management of a broad spectrum of adult diseases. The structure balances inpatient and outpatient experiences, fostering proficiency in both acute and chronic care settings. The residency is accredited by the Accreditation Council for Graduate Medical Education (ACGME), ensuring adherence to the highest standards of medical education.

Residents are integrated into a multidisciplinary healthcare team, promoting collaborative practice and holistic patient care. The program's curriculum is continuously updated to reflect advances in medical knowledge and technology, preparing residents for board certification and future career opportunities. Additionally, the program emphasizes professionalism, communication skills, and ethical practice as fundamental components of internal medicine training.

Clinical Training and Rotations

The clinical training in the Hackensack University Medical Center Program Internal Medicine Residency is designed to expose residents to a wide variety of medical conditions and patient demographics. Rotations are carefully structured to provide comprehensive experience across multiple subspecialties and clinical environments.

Inpatient Rotations

Residents spend significant time on inpatient wards managing complex cases in general internal medicine, cardiology, pulmonology, infectious diseases, and critical care. These rotations focus on developing diagnostic acumen, therapeutic decision-making, and procedural skills. The hospital's status as a tertiary care center ensures exposure to diverse and challenging cases.

Outpatient Clinics

Outpatient training includes continuity clinics where residents follow their own panel of patients under supervision. Clinics involve managing chronic diseases such as diabetes, hypertension, and autoimmune disorders. Exposure to preventive medicine and health maintenance practices is a key component of outpatient training.

Subspecialty Electives

Residents have opportunities to pursue elective rotations in various internal medicine subspecialties, including gastroenterology, rheumatology, nephrology, hematology-oncology, and endocrinology. These electives allow residents to deepen their knowledge and explore potential fellowship interests.

- General Internal Medicine
- Cardiology
- Critical Care Medicine
