Reasons for Bridge Closures

Bridges such as the Lewis and Clark can be closed for a variety of reasons, each with different implications for traffic and safety. Common causes include structural inspections, repair work, extreme weather, and emergency situations.

Maintenance and Repairs

Regular maintenance is essential to ensure the structural integrity and safety of the bridge. This can involve resurfacing, painting, joint repairs, or replacement of critical components. During these periods, partial or full closures may be necessary to allow workers to operate safely.

Weather-Related Closures

Severe weather conditions, including high winds, flooding, ice, or heavy fog, can prompt authorities to close the Lewis and Clark Bridge temporarily. Such closures help prevent accidents and protect both travelers and infrastructure.

Emergency Situations

Unexpected incidents such as accidents, hazardous material spills, or security threats may require immediate bridge closure. Emergency response teams work swiftly to manage these situations, often reopening the bridge as soon as it is safe to do so.

Scheduled Maintenance and Construction Updates
