The national biodefense analysis and countermeasures center is equipped with cutting-edge laboratories and infrastructure designed to handle the most dangerous pathogens safely and securely. Its facilities meet the highest biosafety standards, enabling research on select agents and toxins that require stringent containment.

Biosecurity and Biosafety Measures

NBACC's laboratories operate at Biosafety Level 3 (BSL-3) and Biosafety Level 4 (BSL-4), which are critical for safely studying highly infectious and lethal agents. These facilities incorporate advanced ventilation systems, secure access controls, and decontamination protocols to prevent accidental release and ensure the safety of personnel.

High-Throughput Screening and Diagnostic Platforms

The center utilizes high-throughput technologies and automated platforms to accelerate the identification and analysis of biological threats. These systems enable rapid screening of samples and facilitate the development of diagnostics that can be deployed in field conditions or clinical settings.

Collaborations and Partnerships

Collaboration is a cornerstone of the national biodefense analysis and countermeasures center's approach to biodefense. The center works closely with a broad network of federal agencies, academic institutions, industry partners, and international organizations to enhance biodefense capabilities.

Interagency Cooperation

NBACC collaborates with the Centers for Disease Control and Prevention (CDC), the Department of Defense (DoD), the Federal Bureau of Investigation (FBI), and other key government entities. These partnerships facilitate information sharing, joint research initiatives, and coordinated responses to biological threats.

Academic and Industry Partnerships

The center engages with universities and private sector companies to leverage scientific expertise and accelerate the development of innovative countermeasures. These partnerships promote technology transfer, capacity building, and the translation of research into practical applications for biodefense.
