What is Rogan Tulsi?

Rogan tulsi is an herbal oil extracted from the leaves and flowers of the tulsi plant, a revered herb in Indian culture. The term "rogan" means oil in Persian, and "tulsi" refers to the holy basil, making rogan tulsi essentially basil oil. This oil is rich in bioactive compounds such as eugenol, ursolic acid, and various antioxidants that contribute to its medicinal properties. Unlike other forms of tulsi like teas or powders, rogan tulsi offers a concentrated and potent form, making it a preferred choice for topical applications and therapeutic uses.

Botanical Background

The tulsi plant belongs to the Lamiaceae family and is native to the Indian subcontinent and some parts of Southeast Asia. It thrives in tropical and subtropical climates and is often cultivated in households and herbal gardens. There are several varieties of tulsi, including Rama, Krishna, and Vana tulsi, each with slightly different characteristics and chemical

profiles. Rogan tulsi is typically made from these varieties, depending on the intended use and desired potency.

How Rogan Tulsi is Made

Harvesting and Preparation

The first step is harvesting fresh tulsi leaves and flowers, usually in the early morning when the concentration of essential oils is highest. The plant material is then cleaned and prepared for extraction.

Extraction Process

Rogan tulsi oil is commonly extracted using steam distillation or cold pressing methods. Cold pressing is a mechanical process that crushes the leaves to release the oil. Each method has its advantages, with steam distillation being the most widely used for purity and potency.

Refinement and Packaging

After extraction, the oil may be filtered and sometimes blended with carrier oils for easier application and enhanced shelf life. The final product is then bottled and sealed for distribution and consumer use.
